Education

PES Modern College of Engineering

Aug 2023 – May 2027 (Expected)

B.E. in Artificial Intelligence and Machine Learning | CGPA: 8.1 / 10

Pune, India

• **Relevant Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP

Experience

Full-Stack Product Engineering Intern

Jul 2026 – Present

Mantra4Change (education nonprofit)

Bengaluru, India (Remote)

IMIS (Impact Monitoring Information System): role-based platform for program M&E, reporting and grants

- Resolved a **production database overload** (instance flagged unhealthy) by rewriting **148** Postgres row-level-security policies to evaluate the user once per query instead of once per row, and moving registry aggregates into SQL.
- Built a Program Dashboard on **19 SQL functions**; hardened audit-log permissions to block unauthenticated writes.

Donor Report Generation System: sole developer; internal tool for fundraising, program and finance teams

- Built an app that turns program files from Google Drive (PDF, Word, Excel, slides) into **donor-ready reports**: AI drafting, reviewer comments, version history and a staged approval flow (program, finance, fundraising, executive).
- Enforced structured AI output (forced tool calls, per-page retries, JSON repair) with a check that flags financial figures in narrative pages; backed by **240+ automated tests** and a 7-stage CI pipeline.

Projects

TabulaX | [npm](#) · [GitHub](#) · [Docs](#)

Aug 2026

TypeScript (ESM/CJS), Node.js, Vitest, npm

- Open-source library that extracts **multiple tables** from messy Excel/CSV sheets, including merged and multi-level headers, with rule-based detection (no AI); exact match on all **4,350 cells** of a synthetic ground-truth set.
- Averages **4.9 ms/file** with zero crashes on a 600-file stress suite (1,780 tables); **327 npm downloads** in 2 months.

DevFlow | [Live](#) · [GitHub](#)

Jun 2025 – Jun 2026

Next.js, TypeScript, Convex, WebContainers, Babel, Gemini, OpenRouter

- AI app builder: a planner model (with a **6-model fallback chain**) designs the file structure, files are generated 2–3 at a time, and the generated app runs live **inside the browser** via WebContainers.
- Babel-parses every generated file and sends syntax errors through up to 2 AI repair passes; turns preview errors into a one-click AI fix and regenerates only changed files on follow-up edits.

ContextGraph | [Live](#) · [GitHub](#)

May 2026 – Sep 2026

Next.js, PostgreSQL (Supabase), MCP / JSON-RPC 2.0, Better Auth, Vitest (44 tests)

- MCP server with **6 tools** that gives AI coding agents (Claude Code, Cursor) **persistent memory** per user, with hashed API keys, rate limits, and per-user scoping on every query.
- Saves memories instantly, then a background job sends up to **20 memories per LLM call** to be judged, scored and filed into a scope hierarchy; a weekly cron decays stale nodes.

Technical Skills

Languages: TypeScript, JavaScript, SQL, Python, C++

Frontend: React, Next.js, Tailwind CSS, shadcn/ui

Backend & Data: Node.js, PostgreSQL (RLS, triggers, SQL functions), Supabase, Neon, Convex, REST, Auth/RBAC

AI: LLM tool calling, structured output, OpenRouter, Gemini API, multi-model fallback, MCP

Testing & DevOps: Jest, Vitest, Playwright, Docker, CI/CD (GitHub Actions), Cloudflare, Vercel, Git

Leadership & Achievements

- Head of Technical Team, CoDE Club (IT & AIML)**, 2025–26: led tech for quizzes, talks, events; built the website.
- Open Source:** merged a bug fix into [JupyterLab](#) (15K+ GitHub stars), PR #18157.
- DSA:** solved **446** problems on [LeetCode](#) (180 Medium, 34 Hard).
- Hackathons:** idea shortlisted for the final round at ADCET 2024, DYPDPU 1.0 (2025) and Avishkar (state level).
